

# Notes

- A view that lists some basic info about created users and has the the Edit button on each row. See attached screenshots for more details.
- A modal which shows up when the Create or Edit button is clicked. See attached screenshots for more details.
- Fields like email, phone number and website have a proper validation so that incorrect values are not accepted.
- Used Google Places API to show address suggestions while user starts typing in the address field.
- For the address user will have 2 options :
  1. A simpler address form for where user can enter the details manually.
  2. User can check the “Use Google Places” option, in which case 2 more fields will show up, Latitude and Longitude.
  3. The autosuggestion from Google Places API will be activated when user starts to type in the Address bar.
